Noke makes lab better

Noke makes lab better

Company Introduction

Jinhua Noke Biotechnology Co., Ltd. is a large professional manufacturer in the area of laboratory and medical consumables. It is established in Jinhua, Zhejiang Province. Noke has four production base, possessing more than 7500 square meter 100000 grade dust-free workshop and more than 10000 square meter injection workshop with full production lines of biological consumables like pipette tips, PCR tubes, centrifuge tubes, petri dishes, cyrovials, urine containers etc. We dedicate to be a one-stop lab supplier.

High quality

Quality management system is the base of high-quality products. NOKE has passed ISO 13485 Quality system certification, and also obtained the EU CE certification. It adopts high-precision molds and imported high-end electric injection molding machines, which enable us make precise dimensions products. Strict material and product testing, process control standards and 24/7 unfixed QC inspections allow us to make high-quality products. NOKE also supports OEM and ODM service for we have a strong R&D team.

NOKE products have been sold to more than 50 countries like the Europe countries, the United States, South Asia countries, Middle East countries and etc.

NOKE brand is known by the market. NOKE will dedicate to bring high quality products and service as usual, making due contributions to lab research on scientific also medical area.

PRODUCT

CATALOG

01 Liquid handling

universal pipette tips	2-9
Rainin pipette tips	11-13
Robotic tips	15-19
Centrifuge tubes	20-23
Manual pipette	25-27
Electronic pipette	29
Big volume pipette	30
Dispenser Mate	31
pipette pump	32
Pipette rack	33
Pasteur pipette	34-35
Reagent reservoir	36

02 Culture Consumables

Culture dish	38
Culture plate	39-40
Culture flask	41
Roller bottle	42
Petri dish	43
Inoculation loop	44
Cell Spreader	44
cell scraper	44
Shake flask	45-48
Serological pipette	49

03

Analytical Consumables

Syringe filter	51-56
Filter membrane	57-59
Cell strainer	59
Sampler vials and parts	60-66

04

Molecular Detection

PCR tube	68
PCR plate	69-70
Seal film	69-70

05

Sample freezing&storage

Cryovial	72-73
Cryovial rack	73-74
Square medium bottle	75-76
Plastic reagent bottle	77-81
Glass reagent bottle	82

06

Medical Consumables

Test tube	84
Specimen cup	85-89
Collection swab	90

Manual pipette and rack

Electronic pipette

Big volume pipette

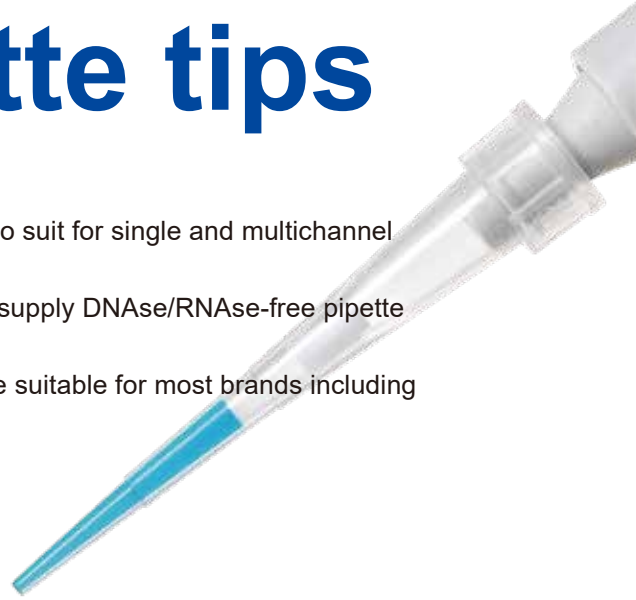

Dispenser Mate

Pasteur pipette

universal pipette tips

Universal pipette tips are made of Polypropylene (PP) and designed to suit for single and multichannel pipettes for transferring small amounts of liquid in laboratory. And we supply DNase/RNase-free pipette tip, sterile pipette tip, non-sterile pipette tips, graduated pipette tips are suitable for most brands including Gilson, Eppendorf, Thermo, BioHit and so on.

- Highly transparent
- Smooth inner wall, reduce hanging wall residue
- Universal pipette tips and Low retention pipette tips

Universal pipette tips

32mm 10ul pipette tips 32mm, 0.1-10ul, clear,

46mm 10ul long pipette tips 46mm, 0.1-10ul, clear

32mm 10ul filter pipette tips 32mm, 0.1-10ul, clear

Rainin tips

Imported polypropylene (PP), USP Class VI standards

- Smooth inner wall, reduce liquid residue, ensure the accuracy of liquid suction
- DNA-free, DNase-free, RNase-free, Pyrogen/Endotoxin free
- Ultra-grinding & molding technology, release agent free
- Withstand temperature ranging from -80°C to 121 °C, stable performance under high temperature and high pressure
- Extra thin-wall design increase product flexibility and improve heat transfer efficiency

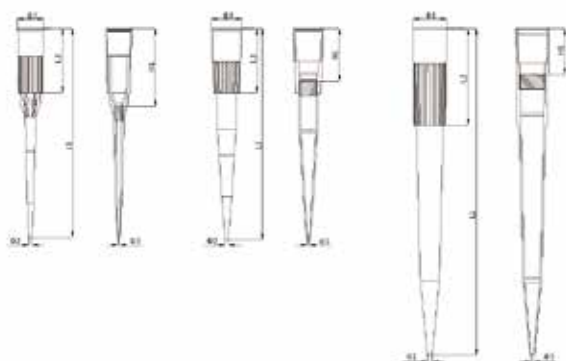

Rainin tips

Low Retention

Reload

Matched with Rainin full-automatic liquid transfer workstation and LTS manual liquid transfer device, mainly used for liquid distribution and transfer, applicable to the LTS platform.

Robotic tips

Tube Design

Structural mapping is carried out according to the original adapter, and the unique thin-walled nozzle technology makes the sealing and adaptability between the tips adapter head and the tip head of the workstation better;

product material

Imported medical grade PP raw materials, select materials in strict accordance with industry requirements

Superb technology

Unique ultra-fine grinding molding technology, no mold release agent, less sample residue;

high-end equipment

Imported injection machines and fully automated production lines ensure efficient output and the best performance of products;

Quality assurance

Produced in a 100,000-class dust-free workshop to ensure no DNase, RNase, protease and pyrogens; high-quality filter elements filter porous tissue, and have super hydrophobicity, forming a solid barrier to aerosols, eliminating the risk of sample cross-contamination ;

external assessment

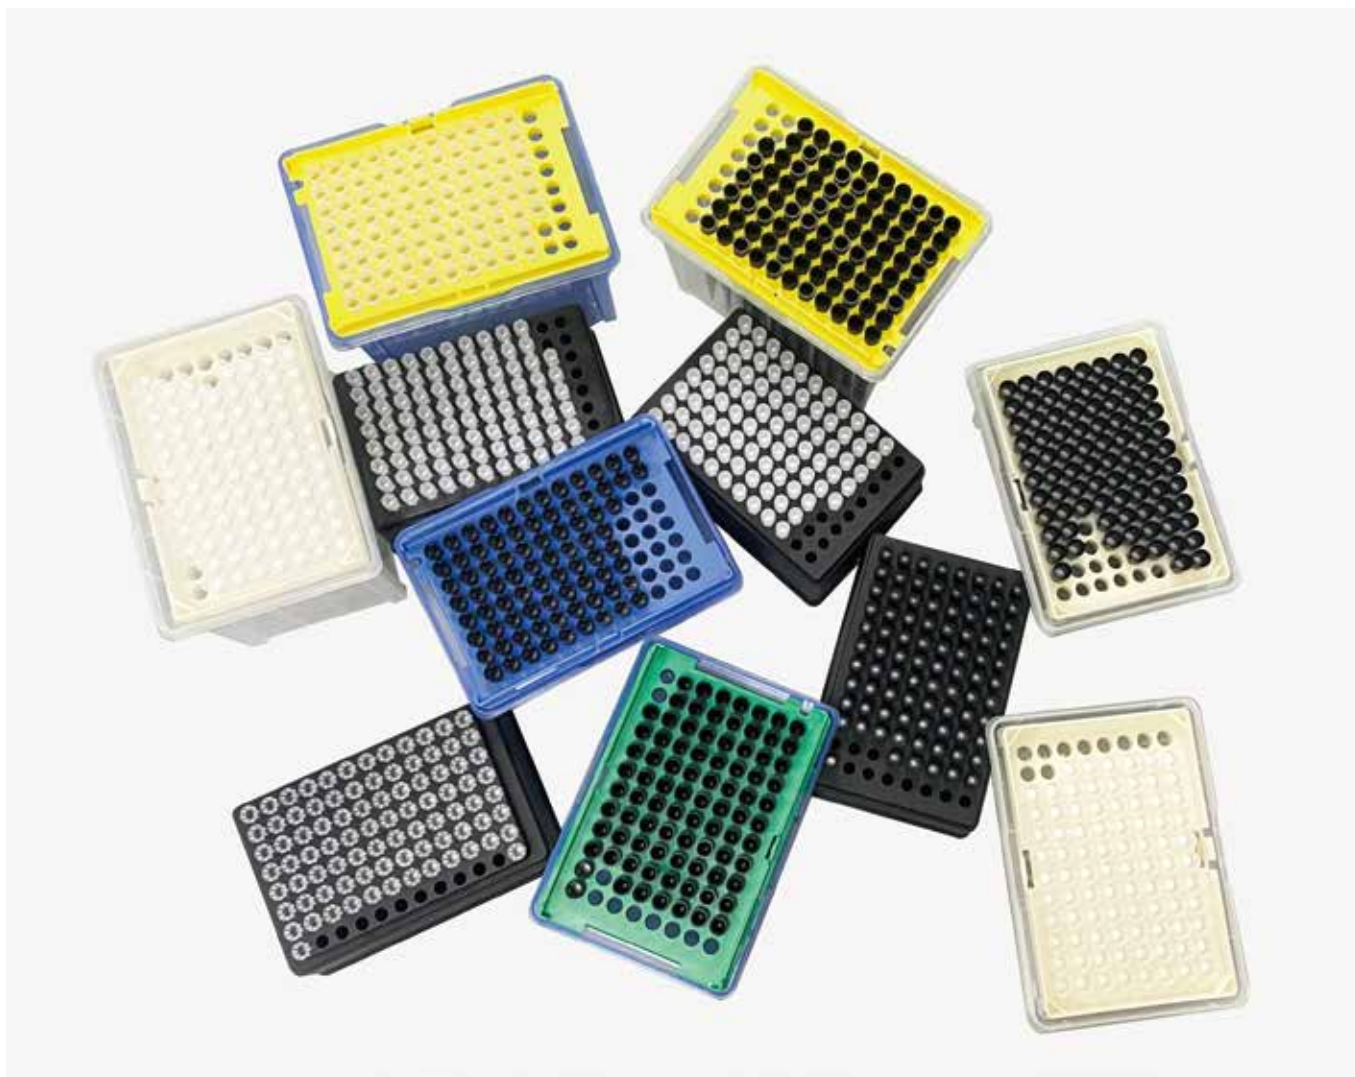

Online monitoring equipment is used to control the size and concentricity of the entire production line;

performance testing

adopt strict quality control standards in the industry to conduct 24-hour finished product inspections;

Sterilization technology

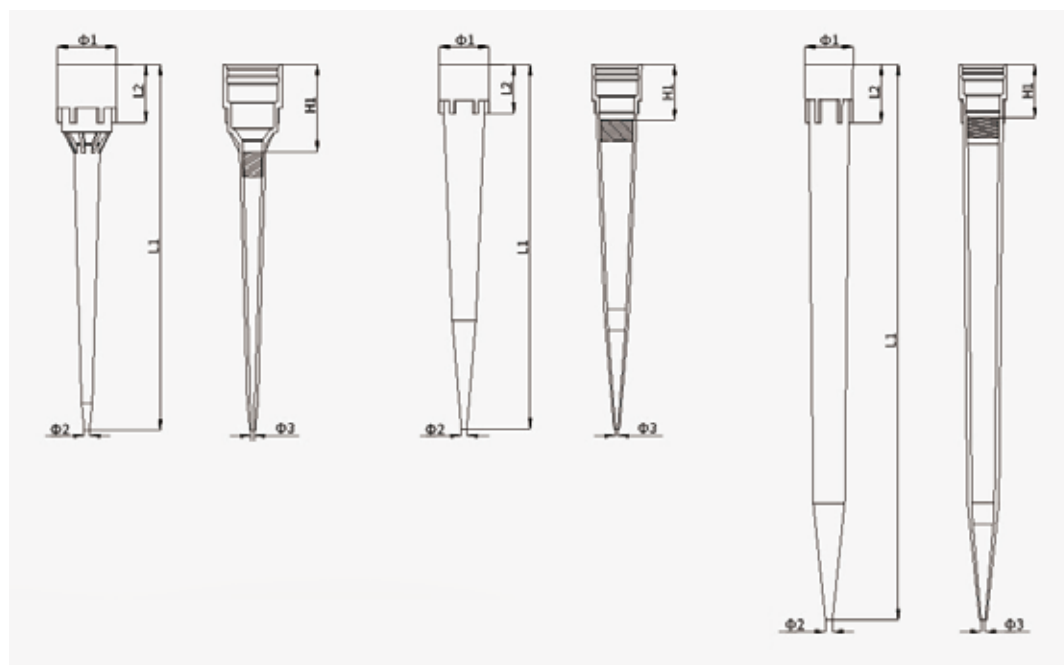

Electron beam sterilization and other sterilization forms;

Hamilton tips

Matched to Hamilton full automatic liquid transfer workstation: Star, Starlet, Nimbus, mainly used for liquid distribution and transfer; Applicable to Hamilton platform.

Centrifuge tubes

Made of High transparency PP material, adapted to micro centrifuge, widely used in molecular biology, clinical chemistry and Bio-chemistry research.

- Available in various volume: 0.2ml, 0.5ml, 1.5ml, 2ml, 5ml, 15ml, 50ml, etc. Chemical corrosion and low temperature resistance.
- No release reagent, plasticizer and fungistat added during production, free of heavy metal.
- Stable under high centrifuge speed, up to 20000 rpm. It can guarantee staff safety and environment while testing toxic samples.
- Adapted to wide range of temperature from -80 °C to 121°C, no distortion.
- Clear graduation on the wall for easier observation.
- Frosted area on the cap and tube for convenient mark and identification.
- Available in sterile by E.O or Gamma radiation.

PIPETTE

Manual pipette

Electronic pipette

Big volume pipette

Dispenser Mate

Pipette Pump

Pipette rack

Pipette

This pipette is a general purpose pipette for sampling and dispensing accurate liquid volumes.

The pipettes operate on the air displacement principle and use disposable tips.

The pipettes cover a volume range of 0. 1ul to 5ml.

All pipettes have been quality tested according to our company's demands. The quality control according to our company's involves gravimetric testing of each pipette with water at 22C° using the manufacturer's original tips.

N3 Pipette

- Lightweight, ergonomic, low force design.
- Digital display clearly reads volume setting.
- The pipettes cover volume range of 0.1µl to 10ml.
- Easy to calibrate and maintain with tool supplied.
- Design helps avoid repetitive strain injuries.
- Calibrated in accordance with ISO8655. Each pipette supplied with individual test certificate.
- The low part is available for autoclaving.

N5 pipette

- Pipettes cover a volume range from 0.1µL to 10mL.
- Ergonomic design provides excellent operating experience.
- Large display window allows for easy volume identification.
- Easy calibration and maintenance.
- Each MicroPette supplied with an individual calibration.
- Certificate according to ISO8655.
- Better design for avoiding dust and easy clean.

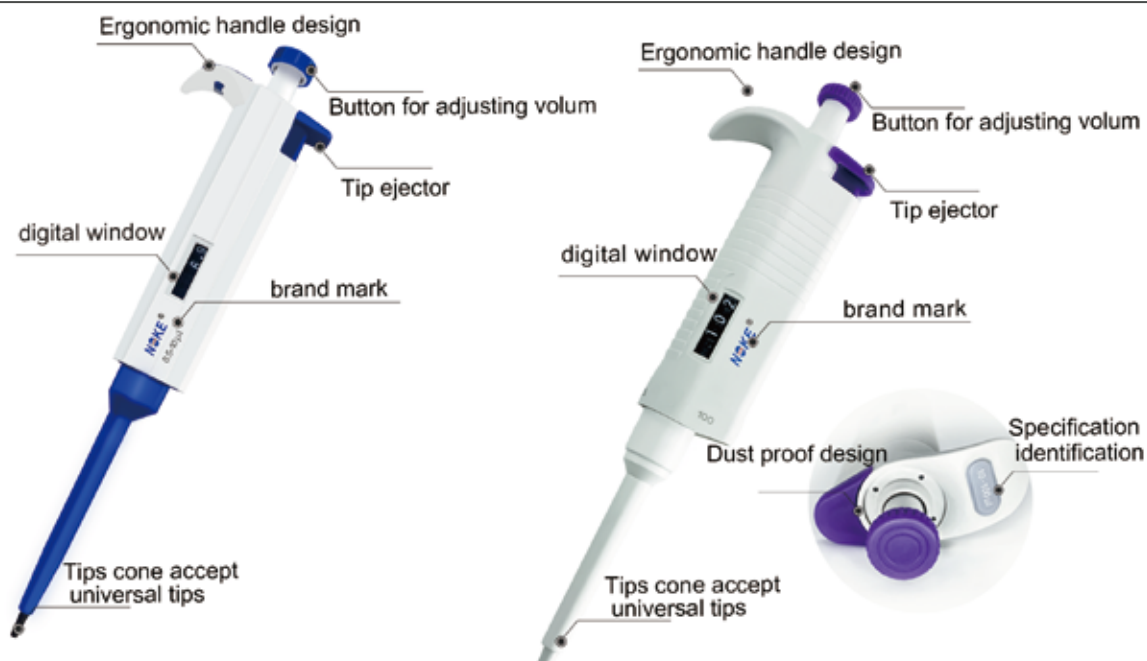

N3 pipette multi-channel

- Dispensing head rotates for effortless.
- pipetting convenience.
- Individual piston and tip cone assembly.
- allow for easy repair and maintenance.
- Compound material-made tip cone secures.
- high sealing performance.
- Compatible with most universal tip brands.

Manual pipette

		5ml	1.20%	60	0.30%	7.5
		2ml	3.00%	60	0.60%	3

Electronic pipette

Motor driven digitally control pipette with multifunctions
Easy Operations and Handling
Intuitive menu interface settings: functions and operations
Minimal force for pipetting operation
High performance ensuring accuracy & repeatability
2 buttons for all operational settings
Adjustable speed for aspiration and dispensing
Li-ion battery enable longer operation time
Convenient and Versatile
Self-calibration applicable

Big volume pipette

Intuitive and convenient speed with 6 levels
Lightweight pipette filler compatible with glass or plastic serological pipettes (0.1 -100)
Ergonomic design for fatigue-free and effective streamlined pipetting
LCD screen displays battery status and pipetting speed
Quiet and powerful motor and pump fills 25
Long-lasting lithium-ion battery

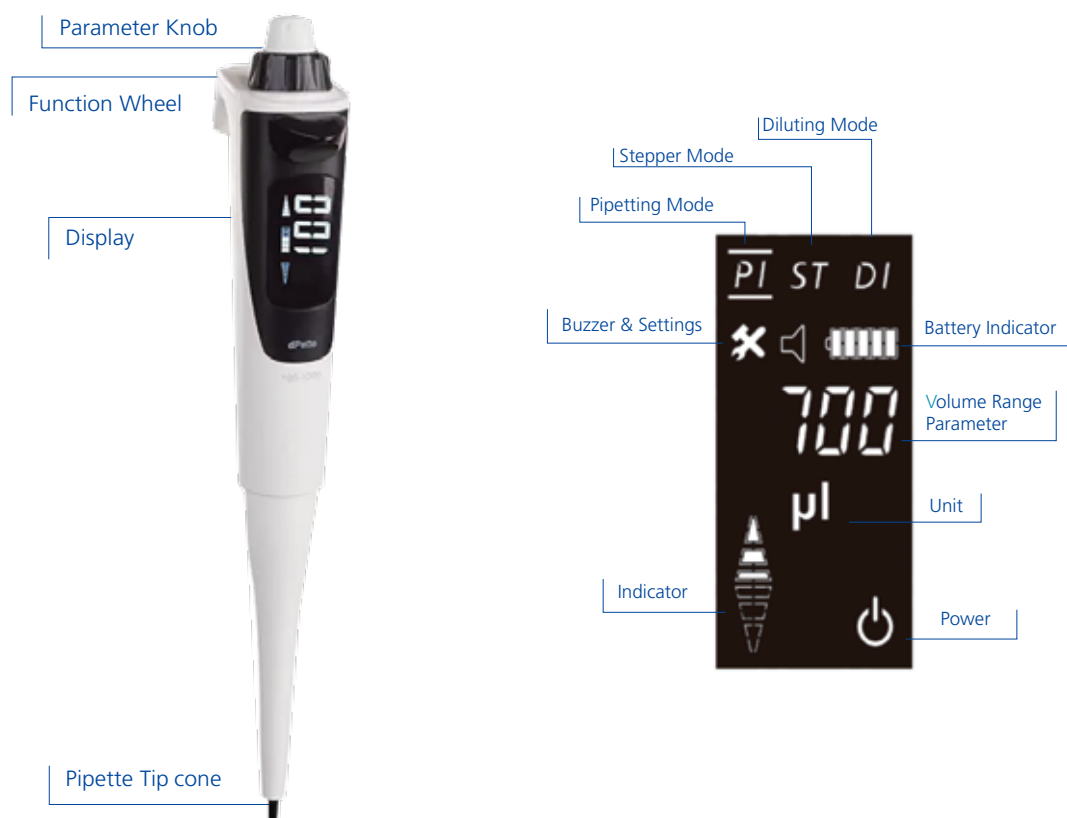

Dispenser Mate

With digital readout for easy handle, high accuracy of liquid separation.
High temperature and chemical resistance and could be whole autoclavable.
The bottle top dispenser equipped with different thread adapters, it is suitable for most of the laboratory reagent bottle.
With safety valve and cap preventing spray and leakage, safe and reliable.

Electronic pipette

Big volume pipette

Select pipetting speed by pressing ↑/↓ button

Large LCD display for low battery warning and speed settings

Aspiration button

Operating button for motor and gravity dispensing

Hydrophobic filter 0.45 μ m

Silicone adapter for 1.0-100 mL pipette tip, fully autoclavable

Aspiration Speed	25mL<5s (6 Level)
Dispensing Speed	Motor/Gravity
Battery	Replaceable lithium battery
Battery Service Life	More than 12 Hours of Intermittence Use
Charging Time	4-5 Hours
Pipette Types	Glass or Plastic Pipette (0.1-100 mL), Pasteur Pipettes
Filter	0.45 μ m Hydrophobic
Weight	208g

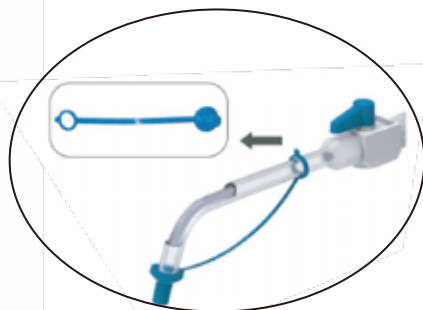

Aspiration Speed	25ml<7s
Dispensing Speed	Motor/Gravity
Battery	Lithium-ion
Battery Service Life	More than 8 Hours of Intermittence Use
Charging Time	2-3 Hours
Pipette Types	Glass or Plastic Pipette (0.1-100mL), Pasteur Pipettes
Filter	0.45 μ m Hydrophobic
Weight	200g

Accessories

Safety Cap For The Tube

Prevent leakage when the bleeder use for a short time.

Multi Screw Adapters

It is suitable for most of the laboratory reagent bottle.

Pipette Pump

Designed for single-handed operation, Pipette Pump identifies itself with a thumbwheel, allowing precise aspiration or dispensing. The feature of side lever enables complete liquid dispensing, without a droplet remaining

- Volume capacity 2mL, 10mL and 25mL
- Colour-coded by volume with green, blue and red
- Thumb wheel guarantees precise operation
- Resistant to acids and alkalis
- Easy for cleaning and maintenance

Pipette rack

Laboratory plastic linear pipette holder L type pipette holds up to 6 pipette

Linear Pipette Rack Features

Made of ABS material

It's chemical resistant, durable and safe.

Easy to assemble and Use.

There are 3 parts. 2 gray ones and 1 blue part.

Put the both ends of the blue one in 2 gray legs.

The hole clip in gray ones can hold the stand firmly.

Keep Pipettes Clean and Organized.

The stand can hold up to 6 pipettes.

It can save your workspace.

Can hold most single channel and multi-channel pipettes.

Round pipette rack

Keep pipette clean, Well-organized.

The round pipette stand design perfectly fits most pipette lines, autoclavable pipettes and more.

Round stand accommodates single and multichannel pipettes for up to 6 pipettes.

Part no.	Description	packs/ctn
NKRK-L	pipette rack, L shape, economical type	
NKRK-H	pipette rack, round shape	12pcs/ctn

Pasteur pipette

Made of LDPE material, Non-toxic, adapted to draw, transfer or carry for small volumeliquid. Optimizing process on surface tension, easy for the liquid flowing. Hightransparency, easy to observe.Can be bend with a certain angle, which is convenient for drawing or adding liquid in irregular or micro container.

High elasticity, adapted to fast liquid transfer without leakage.

Convenient and accurate for use with good repeatability.

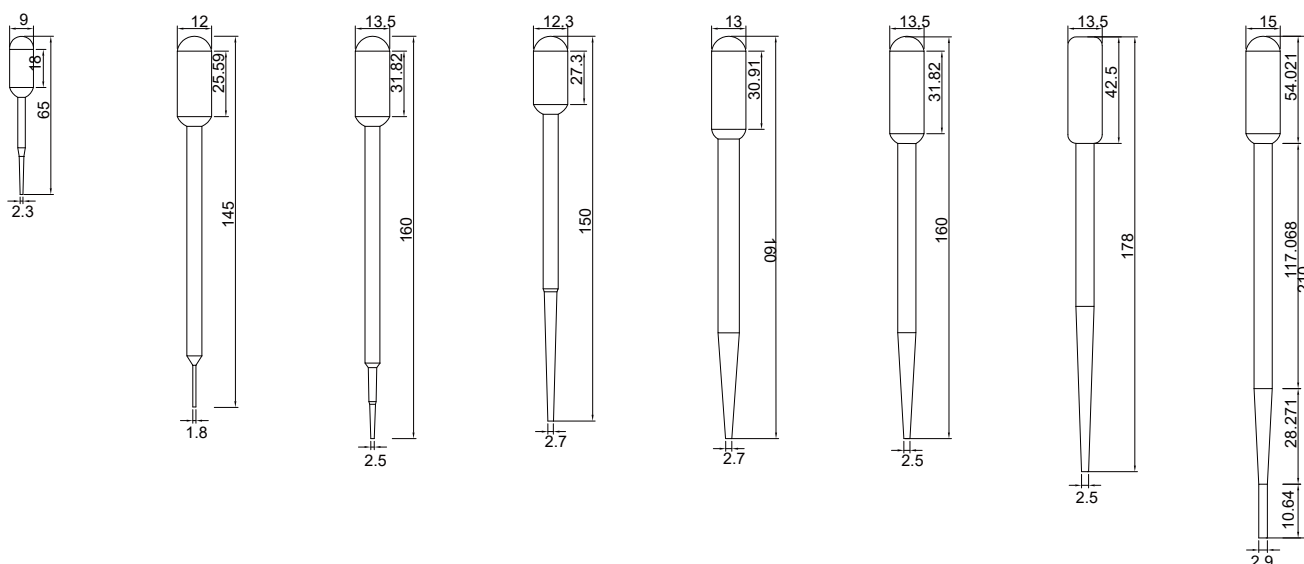

Heat-seal on the tip of the pipette can achieve liquid carry.

Available in bulk or individual pack.

Available in E.O. or Gamma radiation sterile.

Reagent reservoir

Disposable reagent reservoirs are manufactured with polystyrene and fit all multichannel pipettors. Four pour-off corners and a sharp v-bottom to ensure maximum sample retrieval.

- Extra-wide base adds rigidity and stability to reservoir, helping to avoid spills.
- Pour-off spouts on all four corners reduces spillage when pouring reagents out of reservoir.
- Graduations on inside wall enable quick measurement of remaining liquid
- 25 ml 65 mL divided reservoir allows the pipetting of two different reagents

Culture plate

Cell culture plates are indispensable cell culture consumables for cell culture, cell transfection, immunofluorescence, clone formation and other experiments. Cell culture plates are available in 6-well to 96-well formats with TC-treated or untreated surfaces. They are PS materials.

There are edge protrusions on the culture plate cover to ensure stable stacking of culture plates; The culture plate cover has feet to reduce contact with the operating table and reduce the chance of contamination;

Highly contrasting number and letter frame identification and independent hole and well mark, quick and easy identification of hole and well;

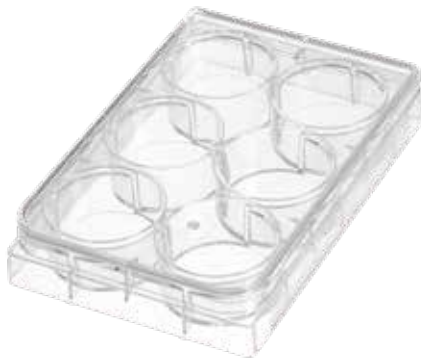

The bottom side of the culture plate is designed with a non-slip area, which is convenient for grasping operations;

The culture plate has ventilation holes, which is convenient for gas and temperature exchange, especially when the culture plates are stacked;

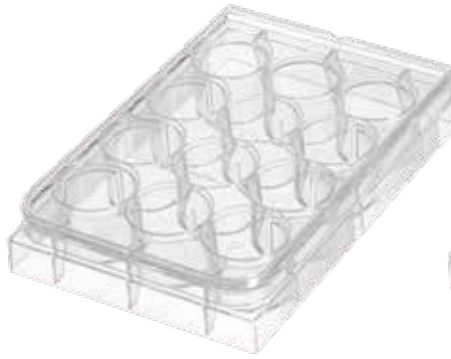

The bottom of the culture plate is very flat, ensuring good microscopic inspection results.

Roller bottle

Roller Bottle is a kind of disposable container which can meet the requirements of large-scale production of cells and tissues in both experimental and industrial production and is widely used in the culture of animal and plant cells, bacteria, viruses and so on.

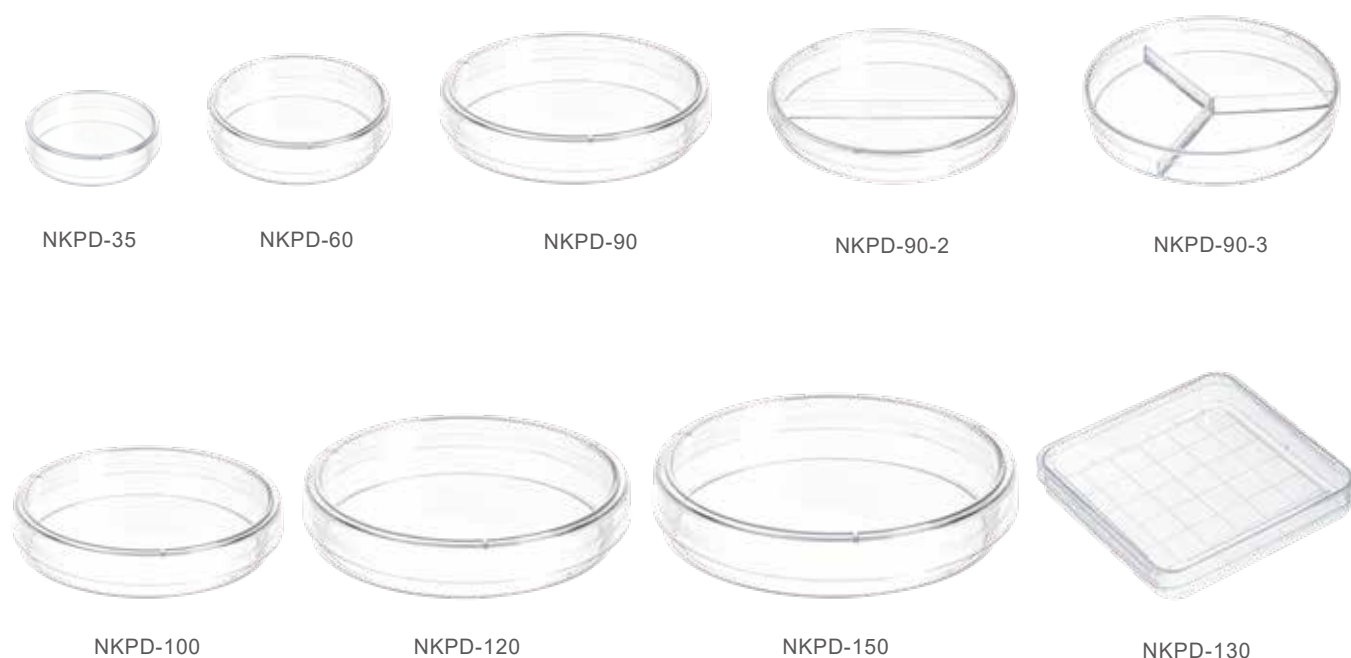

- Material: polystyrene (PS) ,which meet USP VI medical grade.
- Vacuum plasma surface treatment technology, enhance cell adhesion ability, can also be coated with collagen on the inner surface according to customer requirements.
- CGMP standard production, each batch passes the performance test, perfect quality system from the source to ensure product quality and consistency.
- Injection, pull and blow molding process, the product bottle mouth is smooth and round, the contact sealing with the cap is better, and the product residue is less.
- 5L cell bottle adopts two-stage design to increase the contact area. The contact area between the roller bottle and the rotating bottle machine adopts the frosted structure to increase the friction coefficient of the roller bottle and reduce the sliding phenomenon.
- Sterile, no endotoxin, no heat source, no cytotoxicity.

Part no.	Description	packs/ctn
NKRB-2-S	roller bottle, 2 Liter, 850 cm ² culture area, plain surface, seal cap, non TC, sterile	2pcs/bag, 20bag/ctn
NKRB-5-S	roller bottle, 5 Liter, 1750 cm ² culture area, plain surface, seal cap, non TC, sterile	1pcs/bag, 20bag/ctn

Petri dish

Optically clear Petri Dishes made from Heavy Duty Food Grade Polystyrene plastic. Ethylene oxide sterilization, unvented, with lids, and have smooth surface and optimal transparent body. Optimized Design for Growing Bacteria - Perfectly sized 90mm dishes with triple vented lids allow an optimal airflow for cultivation of nutrient agar and to grow bacteria, mold, yeast, fungus and other microbes and organisms.

Part no.	Description	packs/ctn

Inoculation loop/Cell Spreader/scraper

It is used to pick colonies during bacterial culture and perform inoculation operations.

It is widely used in many disciplines such as microbial detection, cellular microorganisms, and molecular biology.

- Ultra-smooth loop surface design facilitates uniform and smooth streaking without damaging the gel surface
- Loops available in 1μL and 10μL sizes with strict measurement; the opposite end of each loop can be used as a needle.
- Round-shaped needle avoid any damage during colonies selection.

Part no.	Description	packs/ctn
NKIL-1-1	inoculation loop 1ul, Ind wrap, sterile	100pcs/pack, 5000pcs/ctn

Cell scraper blade is made of PTE material. The long shaft is made of ABS material. It is mainly used for cells collection. Excellent design ensures minimum harm to cells and superior structure can make it contact to almost all the container surface.

- Special blade free-turning design can keep ideal angle when collecting cells.
- Made of elastic material, the blade is soft to make sure the cells won't be harmed.
- The cell lifter is made of superior PE material which has a good tenacity. Angle design for the lifter blade makes the cell collection smooth without heap.
- Available in E.O. or Gamma radiation sterile. Individual Package.

Part no.	Description	packs/ctn

Shake flask/baffled shake flask

Shake flask

Conical culture flasks (referred to as shake flasks) are ideal for medium preparation, mixing and storage, mainly for culturing cytoplasms with high oxygen requirements, but also for culturing bacteria, fungi, animal and plant cells in suspension.

- Shaker flask is made of medical grade PETG or PC, which meets the requirements of food and drug contact management and avoids BPA problems.
- The product is individually vacuum packed for easy access and to avoid cross-contamination.
- The bottle is seamless and blow-moulded in one go to avoid surface knots or rupture of cells against the wall.
- The surface finish meets the requirement of mirror surface and the permeability is close to glass, reducing the risk of cell wall adhesion.
- Bottle mouth size in accordance with international SBS standards, suitable for quick connection to bioreactors.
- Sterilised by electron beam with SAL=10 , ensuring no DNase/RNase, no pyrogens and no endotoxins.
- Equipped with a 0.2µm gas permeable cap for better mixing of cells and culture medium, increasing air permeability and allowing cells to grow to higher densities.
- The 5L culture flask handle is designed for easy lifting and avoiding the risk of contamination during use due to the head being too close to the flask opening.

baffled shake flask

Flapper shake flask is an ideal culture container for the application of cell biology, microbiology and molecular biology. Flapper shake flask combined with shaking table can effectively resist the viscosity caused by free DNA and cell fragments, increase fluid shear force, reduce cell agglomeration, melt oxygen more fully and promote cell growth. It is very suitable for culturing bacteria, yeast, animal and plant cells.

Shake flask/baffled shake flask

Bottle body material: PC (polycarbonate), bottle cap material: PP (polypropylene);

- The bottle cap is equipped with 0.2 μ m breathable membrane, which is breathable and impermeable to make the dissolved oxygen in the culture medium more sufficient;
- The sterilization shake bottle adopts independent vacuum packaging, which is convenient to take and avoid cross contamination;
- The bottle body is seamless and blow molded at one time to avoid surface marks or cell wall cracking;
- The surface finish meets the requirements of mirror surface, and the permeability is close to glass, which reduces the risk of cell adhesion;
- The size of the bottle mouth meets the international SBS standard and is suitable for fast connection of bioreactor;
- Meet the requirements of food and drug contact management and avoid the problem of bisphenol A Electron beam sterilization, Sal = 10, to ensure no DNase / RNase, pyrogen and endotoxin;

Shake flask/baffled shake flask

big volume shake flask

Material: USPVI PETG material or Bisphenol A-free PC material.

Specification: 3L、5L.

Applications:Widely used in microbiology, cell biology and other fields, can be used with large capacityculture shaker, mainly suitable for suspension cell culture.

- Adopts imported injection, pull and blowmolding process.
- According to cGMP standard production,nodirect contact, product consistency is good.
- The breathable film area of shaker cap is largergthan that of similar products, increasing the breathable capacity, suitable for high-density cellculture, the working volume can be filled to 60%-80%of the total volume, and the cell yield is higher.
- The bottle neck designed with a natural arc, andthe handle is designed in accordance with the ergonomic design, which is convenient to take thebottle and transfer the liquid.
- Equipped with 0.2um barrierbreathablemembrane, optional liquid transfer cap , orcustomized bottle cap suitable for liquid transfer accordine to customer process requirements.

Serological pipette

Made of imported high quality polystyrene (GPPS) in class 100,000 clean workshop. Novel aspiration area design can fit most of the pipettors on the market. Mainly used for accurate measure or transfer for certain volume liquid and is widely employed in the field of cell culture, bacteriology, clinical research, etc..

Available in six capacity: 1.0ml, 2.0ml, 5.0ml, 10.0ml, 25.0ml, 50.0ml. Graduations are calibrated within $\pm 2\%$.

1.0ml, 2.0ml, 5.0ml pipettes are shaped by stretching method.

10.0ml, 25.0ml, 50.0ml pipettes tips are welded to the tube by supersonic wave.

Smooth and clean without drawing lines.

Different colors correspond to different specification, easy to distinguish.

Maximally reduce the liquid adhesion to the tube inner wall and thus improve the sampling accuracy.

Excellent double-side graduation design ideally meet with the demand for liquid adding or reducing.

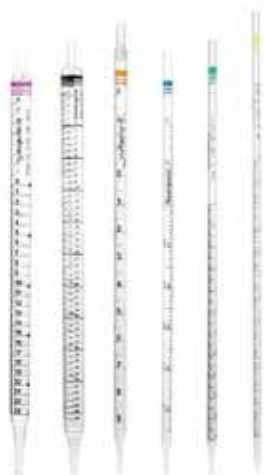

Clear and simple graduation, as well as the negative one for extra volume, makes the liquid drawing and reading easier.

All serological pipettes are assembled with high quality filters.

Strict integrity test on every pipette.

Sterilized by Gamma radiation/E.O.

Available with non-pyrogenic and DNase/RNase-free.

Part no.	Description	packs/ctn
NKSP-1	serological pipette, 1ml, 1/100, 277mm, yellow mark, sterile, individual peel pack	50pcs/bag, 20bags/ctn

Syringe filter

Filter membrane

Cell strainer

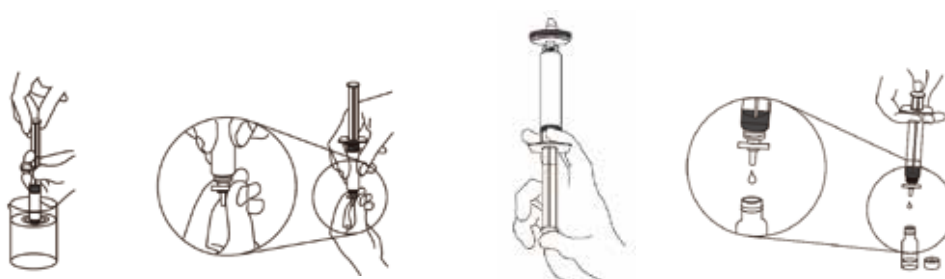

Sampler vials and parts

Syringe Filter

Disposable syringe filter is a fast, convenient, and reliable filtering tool commonly used in laboratories, with a beautiful, lightweight, and high cleanliness. It is mainly used for sample pre-filtration, clarification, particle removal, as well as liquid and gas sterilization and filtration. It is the preferred method for filtering small amounts of HPLC and GC samples.

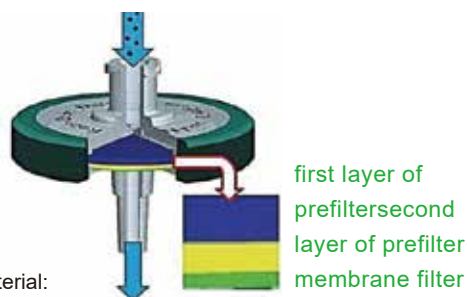

The syringe type filter is used with a disposable syringe, which is a fast, convenient, and reliable filtration and treatment device for small volume samples commonly used in laboratories. The processing capacity ranges from 0.5mL to 200mL.

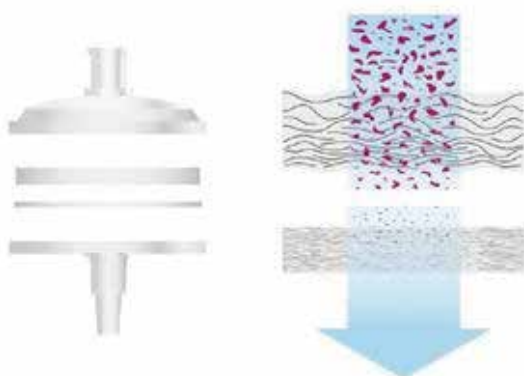

Syringe filter structure form:

- Upper shell
- Membrane
- Lower shell
- Plastic particle injection molding or direct welding

- Membrane material:
PES, MCE, PVDF, PTFE, NY, GF, PP...
- Membrane hole size:
0.1, 0.22, 0.45, 0.65, 0.8, 1.0, 1.2, 3, 5μm...
- syringe filter diameter: 4, 13, 17, 25, 30, 33, 50mm

Features of Syringe filter:

- High flow rate
- High throughput → not easily clogged
- High retention rate (>99%)
- High voltage withstand
- Small retention volume
- Various pore sizes, diameters, and materials
- Low Dissolved Matter

Syringe Filter

How to choose Syringe filter:

Sample volume decides diameter (4,13,17,25,30)

4mm for<1mL, 30mm for>100mL, mostly contracted with

13mm or 25mm ·Sample properties decides membrane

material: NY, PES, CA, MCE, RC, PVDF

(hydrophilic/hydrophobic), PTFE (hydrophilic/hydrophobic):

NY (nylon): widely used, can be used in both aqueous and organic phases, and is alkali resistant but not acid resistant;

PES (Polyether Sulfone): suitable for aqueous phase, with fast filtration speed;

CA (Cellulose acetate)&MCE (mixed cellulose): only applicable to the aqueous phase, pH tolerance range is narrow (5~8), relatively outdated; **RC (Recycled Cellulose)**:

Strong chemical compatibility, not resistant to strong acids and alkalis, the main feature of Sedoris;

PVDF (Polyvinylidene fluoride): mostly hydrophilic, unable to filter DMSO (Dimethyl sulfoxide);

PTFE (polytetrafluoroethylene): Hydrophobic PTFE filters organic phases. To filter aqueous solutions, pre wetting with ethanol or methanol is required. Modified hydrophilic ptfе can filter both aqueous and organic phases, with the strongest chemical compatibility and almost universal performance;

Filter Items				Recommend membrane
Air filtration				hydrophobic PTFE, PP
Liquid filtration	Chemistry and Analysis Laboratory	Aqueous solution filtration	PH 1-14	PES
			PH 2-13	NY, PES
			PH 4-10	PES, MCE
		General organic solvent filtration	PH 4-10	NY, hydrophobic PTFE; hydrophobic PVDF second choice
		Strong acid, strong alkali solution, strong polarity, and corrosive solvent		hydrophobic hydrophilic PTFE
		Cell culture medium		PES, MCE, CA, hydrophilic PVDF
	Biology Lab	Biological solutions, proteins, peptides, etc	PH 4-10	(Low protein adsorption) PES; second hydrophilic PVDF
				PES, CA
	environmental laboratory	Bacterial filtration detection in solution (surface water, Bottled water, etc.)	PH 4-10	MCE, CN, CA
	General Laboratory	Various pre filtration		GF, PP

Sterile syringe filter

Filtration sterilization is one of the fastest methods among various liquid sterilization methods, and can reduce the impact of sterilization process on the active ingredients of the liquid. Sterilizing needle filters are widely used in various fields of life sciences

Syringe Filter

to sterilize various small volume biological liquids, such as proteins, culture media, additives, buffers, reagents or drugs. 0.22um filter is used to remove all bacteria, 0.45um filter is used to remove particles from the liquid.

- Single-use, γ Radiation sterilization
- Sterilization and filtration efficiency (0.22 μ m) LRV > 7 Shortwave Monomonas,
- ATCC19146, ASTM ·Bacterial Challenge Experiment
- Dnase Rnase free, Non-pyrogenic,
- no surfactant, extremely low extract
- Extremely low protein adsorption rate < 1.5% (PES)
- Ultra high flow rate and flux, faster and more liquid filtration

Filter membrane

Nylon

Suitable for filtering aqueous solutions and most organic solvents. It is suitable for use with a wide range of biological preparations and can be used where other membranes are unsuitable. Nylon membranes are hydrophilic, eliminating the need for wetting agents that could be extracted when filtering aqueous solutions. It is flexible, durable and tear resistant.

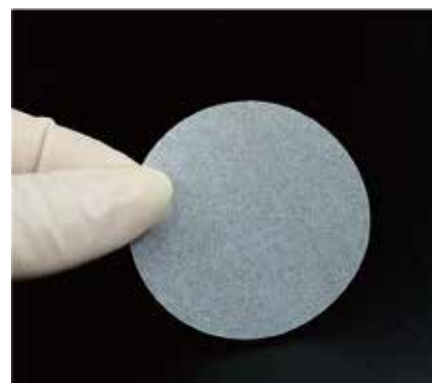

PES(Polyethersulfone)

It is hydrophilic. Low protein binding and stable in alkaline pH. It is recommended for aqueous applications and biological samples. It is also an alternative choice for require a filter that exhibits extremely low protein binding characteristics.

PTFE

PTFE is the membrane of choice for use with the aggressive solvents, liquids and gases that can attack other membranes. It is resistant to most acids, alkalis and solvents. The hydrophobic nature of the membrane also has applications for air and gas sterilization. Hydrophilic PTFE can be used to filter aqueous and organic mixed liquids.

MCE (Mixed Cellulose Ester)

They are modified to offer researchers the lowest binding filters available. Due to the extreme low binding characteristics, these filters provide higher throughputs than competitive offerings and reduce filter changes when filtering.

Hydrophilic PVDF

Used in applications such as multi-plexed bead-based assays, the filtration of dilute protein samples, cold and hot water for injection (WFI), chemicals, aggressive solvents and sanitizing agents. Not suitable for acetone, DMSO or based >6N

Filter membrane

Material	Pore size (um)	Diameter (mm)	Package

Single Packed Sterile Membranes

They can be used for colony counting, particle testing, microscopy and sterility testing. The membrane filters are made of MCE, PES, CA, RC, or Nylon, choice between gridded or non-gridded. Among all these material, MCE is the most common type. Sterile MCE is a mixture of nitrocellulose and cellulose acetate.

Filter membrane

- High porosity and fast flow rate
- The membrane disc is not damaged and is clean, nodust and other pollutants, easy to observe.
- Clear and standard Grid The membrane and its grid line has excellent resistance to ethanol and other reagents
- MCE is very suitable for the growth of micro organisms, the revitalization rate of micro organisms is higher than 90%
- Individually sterile package for easy use
- The result is accurate and reproducible. Themembrane disc with bacterial colonies after dryingcan be stored forever and meets GMP requirements.

Part no.	Description	packs/ctn
NKFM-M-4722-S	filter Membrane, MCE material, diameter 47mm, pore size 0.22um, sterile	1pcs/pack, 100pcs/box
NKFM-M-4745-S	filter Membrane, MCE material, diameter 47mm, pore size 0.45um, sterile	1pcs/pack, 100pcs/box
NKFM-M-5022-S	filter Membrane, MCE material, diameter 50mm, pore size 0.22um, sterile	1pcs/pack, 100pcs/box
NKFM-M-5045-S	filter Membrane, MCE material, diameter 50mm, pore size 0.45um, sterile	1pcs/pack, 100pcs/box

Cell strainers are manufactured from a strong nylon mesh with evenly spaced mesh pores and gamma resistant. These cell strainers are sterile, rapid, easy-to-use devices for isolating primary cells to consistently obtain a uniform single-cell suspension from tissues. Protect your valuable flow cytometry and cell sorting instrumentation by reliably removing clumps and debris from cell suspensions and clinical samples prior to analysis.

- Available in 3 mesh sizes, 40 µm, 70 µm, and 100 µm
- 3 different colors: purple, orange, and green, for easy identification.
- Improved uniformity of single cell suspensions
- Made of a strong nylon mesh with evenly spaced mesh pores.
- The extended lip on the strainer enables aseptic handling with forceps
- Ready-to-use, sterilized by gamma irradiation
- Individually packaged
- DNase-& RNase-free Non-pyrogenic

Part no.	Description	packs/ctn
NKCS-40	cell strainer, 40um, Ind wrap, sterile	1pcs/pack, 100pcs/ctn
NKCS-70	cell strainer, 70um, Ind wrap, sterile	1pcs/pack, 100pcs/ctn
NKCS-100	cell strainer, 100um, Ind wrap, sterile	1pcs/pack, 100pcs/ctn

Sampler vials and part

Noke lab has been involved in the design and manufacture of vials, caps and seals for chromatography as long as chromatography has been used as an automatic analytical technique. Therefore Noke lab is able to offer suitable combinations for the most popular instruments currently in use .

- Pass the ISO9001:2015 quality certification. Audited and issued by the most stringent SGS in the industry.
- Experienced technician with equipped R&D center to fulfill new research and product development.
- Be 100% compatible with original Agilent, Waters, Virian, Shimadzu, Etc.
- All materials are produced in a class 100,000 cleanroom.
- OEM services are available.

Proper septa selection is critical to preventing contamination and avoiding damage to the needle and instrument.

What is glass 7.0/5.0 type?

Type	Material	Coefficient of Thermal Expansion	Features
7.0	Borosilicate Glass	$(6.2 \sim 7.5) \times 10^{-6} \text{K}^{-1}$ (20~300°C)	Economy Type Competitive Price For Disposable Quick Test
5.0	Borosilicate Glass	$\leq 5 \times 10^{-6} \text{K}^{-1}$ (20~300°C)	Good Price For Test and Save Samples

Reagent reservoir

PCR tube/PCR plate

Made of clean PP material, thin wall and uniform thickness can keep good heat transfer. 0.2ml strips is available in two types: Transparent and white, respectively applicable to normal PCR and real-time PCR(qPCR) reaction. Good sealing performance of the 8-strip while lid closed. Easy to open the cap without contamination. Sterilized by Gamma radiation.

PCR plate

Strictly produced in accordance with high-quality standards, the experimental results are uniform, the tube wall is thin and uniform, and can use 8/12 strip tube covers or sealing film. Advanced 100,000-level purification workshop production to ensure that the products are pyrogen-free, endotoxin-free, DNase-free, and RNase-free. The product has undergone rigorous design, manufacturing and compatibility testing to ensure that the experimental data is accurate and effective.

Cryovial

- Cryogenic tube is made of medical grade polypropylene (PP) and is endotoxin-free. They are disposable laboratory consumables dedicated to storing biological samples.
- The skirt lines on the cap and the tube body are easy for screw. The cap has a built-in silicone O- ring to prevent liquid leakage.
- When operating according to the standard, there is no bursting, good sealing and no leakage.
- The tightness can be guaranteed even at the lowest storage temperature, ensuring the safety of samples and laboratories.
- Can withstand low temperature. (... be stored in the gas phase liquid nitrogen and can withstand low temperature to $-196^{\circ}\text{C}.$)
- Multiple color options for the cap.

cardboard

- Made from durable cardboard with Superior Coatings
- Chemically resistant to alcohols and mild organic solvents
- Temperature range: stable from -196°C to 121°C
- Suitable for liquid nitrogen storage

Cryovial rack

PP

- High transparency PP material.
- Temperature range: stable from -90°C to 121°C.
- Chemically resistant to alcohols and mild organic solvents.

PC

- For easy inventory management of cryogenic storage vials used in cell culture, pharmaceutical research and other biotechnology labs
- Store in mechanical freezers or liquid nitrogen
- Boxes are vented, allowing rapid cooling of contents and full drainage
- Made of tough polycarbonate for use with temperatures from -196°C to 121°C
- Chemically resistant to alcohols and mild organic solvents

Square medium bottle

Serum bottles, also known as square culture medium bottles, are mainly used for the storage and transportation of serum and cell culture medium in cell culture experiments. Serum bottles are commonly used containers in experiments in the fields of medicine, biology, and chemistry.

- Media bottle / serum bottle material: PET and PETG, cap material: HDPE
- The bottle body is as transparent as glass and PETG bottle the light transmittance is up to 90%.
- The scale is accurate and clear; crack resistance, fall resistance and puncture resistance
- The bottle body is square, which is convenient for holding, storage and transportation;
- PET bottle Specifications include 30ml, 60ml, 125ml, 250ml, 500ml and 1000ml; PETG bottle include 125ml, 250ml, 500ml and 1000ml;
- The chamfering design of bottle mouth and cap has been strictly tested to ensure no liquid leakage;
- No DNA / RNA enzyme, no heat source and no endotoxin, meeting USP class VI standard;
- Recommended Operating temperature: PET:- 70 °C ~ 120 °C, PETG: - 60 °C~75 °C

PET Square medium bottle

Thicker bottle wall, puncture resistant, less prone to breakage, higher transparency, and non-toxic

Adopting a new leak proof design, unlined bottle cap, straight shoulder half buttress thread, and bottle mouth chamfer design

Made of PET, with a minimum tolerance of -70°C and can be used over a wide temperature range PET

The bottom is convex and curved, easy to clean, stable and reliable, and the square design is easy to hold

PETG Square medium bottle

Cap chamfer design ensures no leakage

Thicker bottle wall, puncture resistant, less prone to breakage, higher transparency, and non-toxic

Two sided scale, precise and clear scale

The bottom is convex and curved, easy to clean, stable and reliable, and the square design is easy to hold

Plastic reagent bottle

NOKE LAB Reagent bottles are made of high quality polypropylene PP /high density polyethylene HDPE raw material, non-biotoxic, produced in 100,000 grade cleanroom production environment, multiple quality system certification. The sterilised plastic bottles are sterilised by electron beam irradiation and are ready for use, which greatly improves the packaging efficiency of users.

- A complete range of 8ml, 15ml, 30ml, 60ml, 125ml, 250ml, 500ml, 1000ml transparent, native white and brown, brown reagent bottles with excellent light shielding for storage of light sensitive substances.
- Professional leak-proof bottle mouth design, no need for inner cap or inner gasket protection, excellent sealing performance, 100% guaranteed no leakage, wide mouth design, easy access to liquids.
- Imported high-quality raw materials, excellent physical and chemical indicators, with strong resistance to pressure, impact and acid resistance, polypropylene high temperature resistance of 121 °C, high density polyethylene HDPE low temperature resistance -40 °C, and Meeting the requirements of autoclave processing.
- The introduction of imported high-precision digital control production equipment, exquisite workmanship, comfortable to the touch, uniform bottle thickness, high gloss, no colour difference, high uniformity bet
- High-end molding technology and surface treatment technology are used in the process, the inner and outer surfaces of plastic bottles are smooth, reagents do not hang on the wall, greatly reducing sample loss. Providing professional customization services with strong mould making capabilities to provide customized products.

Plastic reagent bottle

Wide-plastic reagent bottle

- The reagent bottle is made of high-quality polypropylene/high-density polyethylene HDPE raw materials, with no biological toxicity. It is produced in a 100000 level clean workshop production environment and has multiple quality system certifications to ensure DNase/RNA free, pyrogen free, and endotoxin free. The sterilized plastic bottle is sterilized by electronic beam irradiation, which can be used immediately after disassembly, greatly improving user packaging efficiency.
- Complete variety, 8ml, 15ml, 30ml, 60ml, 125ml, 250ml, 500ml, 1000ml, available in transparent, natural white, and brown color. Brown reagent bottles have excellent shading function and can be used to store photosensitive substances;
- Adopting a professional anti leakage bottle mouth design, without the need for internal cover or pad protection, with excellent sealing performance, 100% ensuring no leakage, wide mouth design, and convenient liquid access;
- Selected high-quality imported raw materials with excellent physical and chemical indicators, possessing strong compressive strength, impact resistance, and acid resistance. Poly (ethylene glycol) flame retardant has a high temperature resistance of 121℃ high-density poly (ethylene glycol) flame retardant HDPE has a low temperature resistance of -40℃, and meets the requirements of high requirements for temperature and high pressure sterilization treatment,
- Introducing imported high-precision digital control production equipment, the product has exquisite workmanship, comfortable feel, uniform thickness of the bottle body, high glossiness, no color difference, and high uniformity between different batches;
- Adopting high-end molding technology and surface treatment technology in the process, the inner and outer surfaces of plastic bottles are smooth, and reagents do not hang on the wall, greatly reducing sample loss.
- We provide professional customization services and have strong mold manufacturing capabilities, which can provide customized products for users;

Wide-plastic reagent bottle

- High quality structural design: reagent bottles utilize high-quality structure, resulting in lighter weight and lower bottle costs. The factory can meet the needs of batch packaging
- Narrow mouth reagent bottles are available in various packaging options such as 30ml, 60ml, 125ml, 250ml, 500ml, and 1000ml. Product C is complete and comes in transparent PP, brown PP, natural PE, and brown PE options. Brown reagent bottles have excellent transparency and can be used to store photosensitive substances,
- Pure PP/HDPE material: The reagent bottle is made of imported pure PP/HDPE material, with no biological

Plastic reagent bottle

toxicity, excellent physical and chemical indicators, strong compression resistance, impact resistance, and acid resistance. Polypropylene is resistant to high temperatures of 121 °C and meets the requirements of high-temperature and high-pressure sterilization treatment. Polyethylene is resistant to low temperatures of -40 °C.

- Leak proof design: The reagent bottle has a leak proof design, and repeated opening and tightening will not affect the sealing performance of the bottle. The sealing ring inside the bottle cap tightly adheres to the inner edge of the bottleneck slope to form a leak proof valve to ensure the lid is sealed
- Uniform wall thickness without hanging: advanced molding technology and manufacturing equipment ensure that reagent bottles have a more uniform wall thickness, high-quality bottle walls, and a sturdy structure, making them suitable for any laboratory application and effectively preventing breakage or puncture. The bottom of the bottle is relatively flat, which is conducive to smooth operation on the filling line
- Sterilized plastic bottles are sterilized using electron beam irradiation, which can be opened and used immediately, greatly improving user packaging efficiency. Ensure no DNase/RNA, no pyrogens, no endotoxins

Collection swab

Test tube

The test tube with screw cap is made of PS material with smooth and smooth inner wall, excellent transparency and strong chemical resistance. PP material test tube with screw cap can withstand the centrifugal rate of 5000 revolutions per minute, no pipe wall infiltration or pipe body damage. There are various specifications of the products to meet the requirements of different experiments.

NKTT-4-CA-D-S	plastic test tube with cap, PS, 16*150mm(assembled), Ind wrap, sterile	2000pcs/ctn

Specimen cup

Vacuum urine collector is composed of Urine cup and vacuum urine collection tube, made of PET Tube and PP container, mainly used for urine specimen collection

- Good sealing performance prevents leakage effectively, convenient for specimen storage and transportation, also can avoid the contact between medical staff and specimen.
- The cap features a label that seals the cannula in order to prevent patients from contacting with collection needle.
- Available with customized bar code.
- Sterilized by E.O.

Part no.	Description	packs/ctn
NKVC-60-D-S	60ml vacuum urine cup, PP, Ind wrap, sterile	300pcs/ctn
NKVC-60-D-S-L	60ml vacuum urine cup, PP, Ind wrap, labelled, sterile	300pcs/ctn
NKVC-90-D-S	90ml vacuum urine cup, PP, Ind wrap, sterile	400pcs/ctn
NKVC-90-D-S-L	90ml vacuum urine cup, PP, Ind wrap, labelled, sterile	400pcs/ctn
NKVC-120-D-S	120ml vacuum urine cup, PP, Ind wrap, sterile	300pcs/ctn
NKVC-120-D-S-L	120ml vacuum urine cup, PP, Ind wrap, labelled, sterile	300pcs/ctn
NKVC-120A-D-S	120ml vacuum urine cup, PP, Ind wrap, sterile(superior quality)	300pcs/ctn

Specimen cup

Urine collection process

I . Open the cap anticlockwise.
(Attention:Do not touch or get off the label)

II . Put the cap on a clean surface(Attention: Do not touch the suction nozzle and the inner surface of the cap and container)

III . Collect the urine sample,
Recommended volume: 60ml.

IV . Turn the cap tightly on the cup clockwise and send the container to test center.

Urine collection of medical staff

V . Gently mix the urine specimen before transferring .

VI. Partially remove the cap protection label.

VII. Insert the vacuum tube into the cavity and gently press down. The needle will puncture into the tube.Keep the tube pressed until it is full.

VIII. Remove the tube after it is filled completely and restick the protection label over hole.

VIII. Gently shake the urine tube and finish the sampling process.

Vacuum urine container
